Name of Program: Learning the Pharmaceutical Globalization Trend through a Culture and Language Prism

Name of Program Director: Dr. Bin Xu

Location of Program: Beijing, China

Dates of Program: May 9 – May 24, 2013

Program Description: This program will take place in Beijing, China. Students will enjoy the mild temperature and climate in the spring of Beijing. The spring days in north China are normally comfortable, around 60-85F, having some rain, but not much. On some nights, temperatures might be a little bit lower, and a thin jacket is recommended. In each double occupancy dorm, a separate air conditioning unit is installed. During the program, there will be a normal amount of walking in most of the days (1-2 miles/day, including the walks to the classroom/dining hall, and the tour around the research university/institute labs and companies). On some days students should expect more walking for excursion activities and historic site visits, etc. When we visit some places that have a lot of steep stairs, like the Temple of Heaven and the Great Wall, escalators and elevators will not be available. Throughout the program, students will travel by plane, subway and bus. The buses are usually air conditioned.
