Frontiers in Biomedicine takes place in central Taiwan. During the summer, temperatures range from the 70s at night to the high 90s during the day, and the atmosphere is often humid. Hotels, classrooms, bus and train transportation will be air-conditioned in most cases. During excursions, we will spend time walking and standing outside, so it is important that participants dress comfortably, wear sun protection and carry bottled water with them. Participants should be sure to bring comfortable walking shoes. Participants should visit a health clinic at least 8 weeks prior to departure to make sure that their vaccinations are current.
